

National Disease Burden Analytics – Zambia

This report is designed to enhance understanding of disease burden and health outcomes across the country. It visualizes key indicators such as reported cases, estimated deaths, and disease distribution, highlighting both temporal and spatial variations. This tool empowers health professionals, policymakers, and analysts to identify emerging health threats, prioritize resources, and strengthen evidence-based planning. Through its interactive design and data integration, the dashboard demonstrates how timely and accurate data can drive better public health outcomes.
